

SUPPLEMENTAL SPECIFICATION

**REVISIONS TO STANDARD SPECIFICATION 403 -
COLD MILLING OF BITUMINOUS CONCRETE PAVEMENT**

403-4 METHOD OF MEASUREMENT

Article 403-4.01 is revised to read as follows:

403-4.01 Cold milling of bituminous concrete pavement will be measured by the cubic meter of pavement acceptably milled to the depth, cross section of profile grade specified in the contract documents or ordered by the engineer.

- a. For each strip of existing pavement removed by the cold milling process, the volume removed will be determined by multiplying the average depth removed, measured to the nearest millimeter, by the length and width of the strip measured to the nearest centimeter.
- b. The average depth of each strip will be determined by measuring the depth removed at the lip along the longitudinal edge of the strip, every 6.0 meters or fraction thereof, and averaging these measurements.
- c. Pavement removed in excess of the depth, cross section or profile grade specified in the plans, or ordered by the Engineer, will not be included in the measurement for payment.

403-5 BASIS OF PAYMENT

403-5.02 Payment will be made under:

The pay unit is revised to read as follows:

<u>Pay Item</u>	<u>Pay Unit</u>
Cold Milling Bituminous Concrete Pavement	Cubic Meter
